Report for PEP Section in mzTab File

example_5

The PEP section of the mzTab file contains 26,794 quantified peptide features measured in 54 samples.

	number of peptides
quantified	26,794
identified (total)	26,794
identified (unique modified)	21,658
identified (unique stripped)	19,580

Table 1: Total number of quantified and identified peptides.

mod	specificity	number
Oxidation	M	4942
Methylthio	C	4473
Dioxidation	M	112
Label:13C(6)15N(2)	K	26
Label:13C(6)15N(4)	R	17

Table 2: Statistics of modifications.

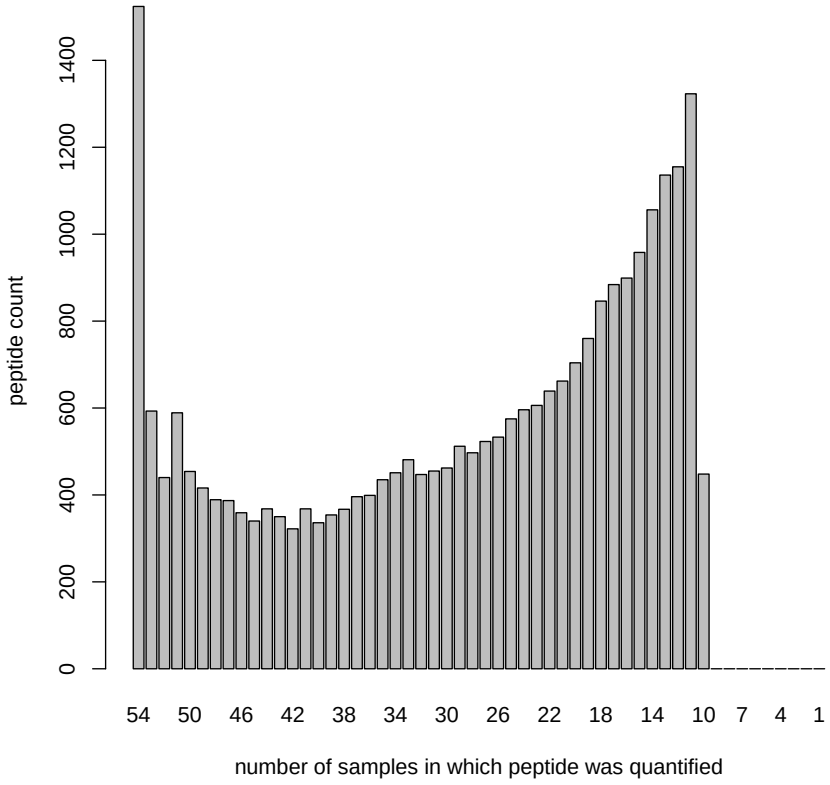

Figure 1: Frequency plot of peptide quantifications.

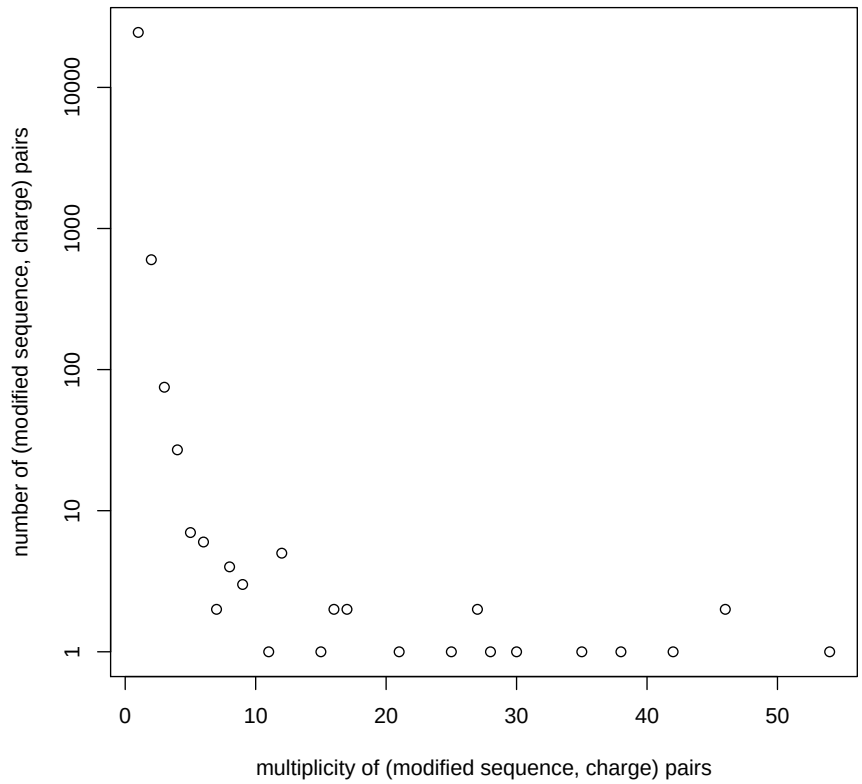

Figure 2: (modified sequence, charge) pair multiplicity vs frequency plot. Each peptide feature (characterised by a (possibly) modified peptide sequence and a charge state) should ideally occur only once in the analysis. In other words, peptides of multiplicity 1 should have a very high frequency. The plot below should show a significant spike on the left and can be used as QC of the analysis.

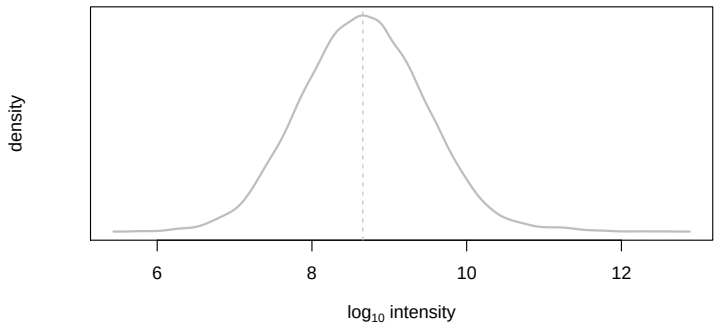
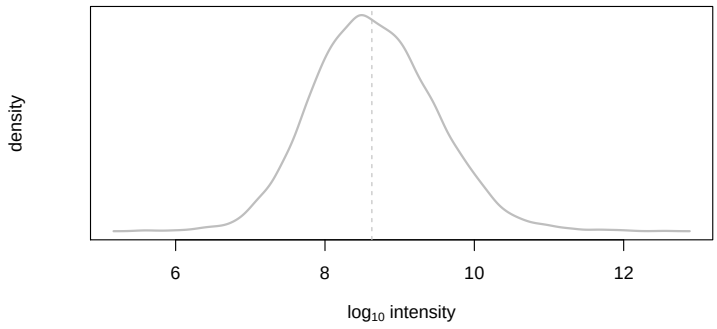
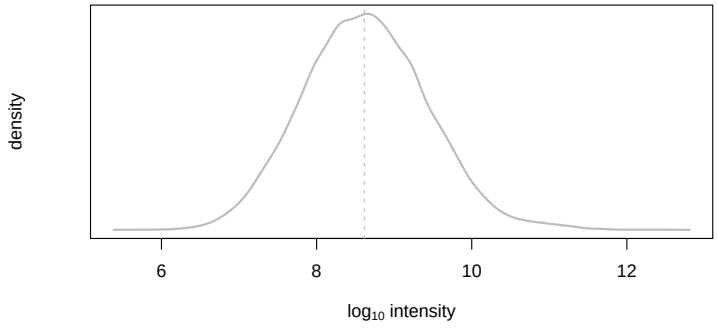


(a) peptide abundances 1, median(intensity) = $455,025,504$



(b) peptide abundances 2, median(intensity) = $424,578,000$



(c) peptide abundances 3, median(intensity) = $412,578,512$

Figure 3: peptide abundance distributions.

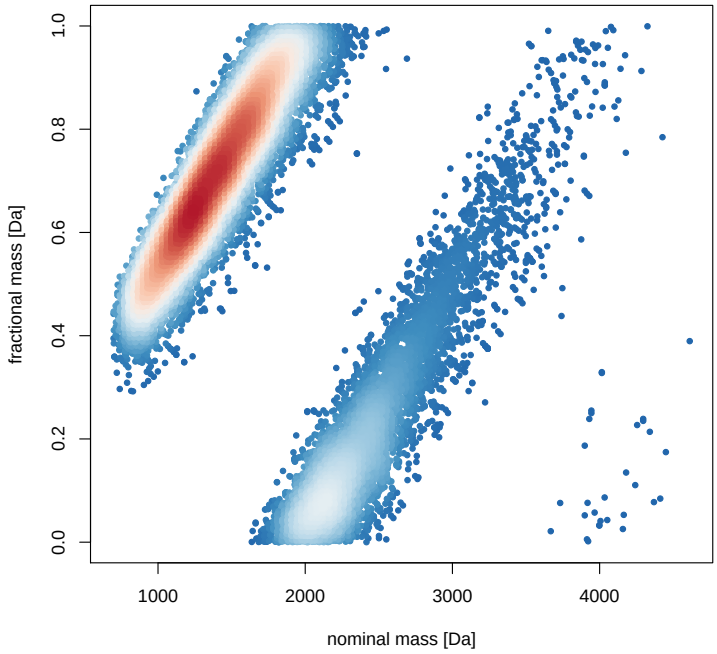


Figure 4: Kendrick nominal fractional mass plot

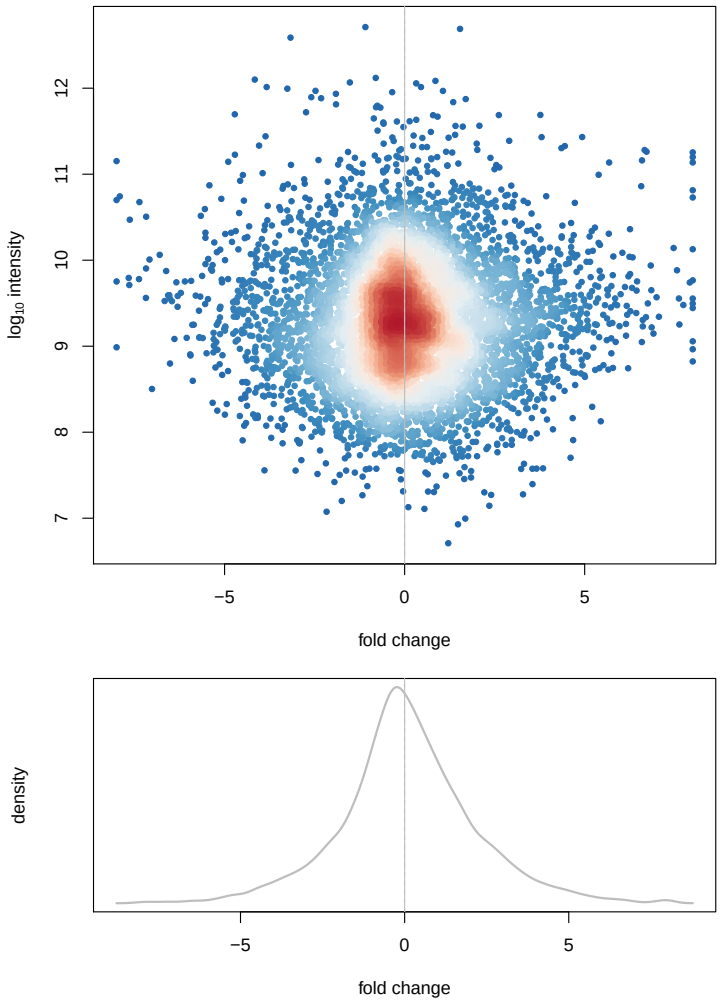

Figure 5: Fold changes of peptide abundances 1 and 2.
median(fc) = −0.0026 sd(fc) = 2.0776

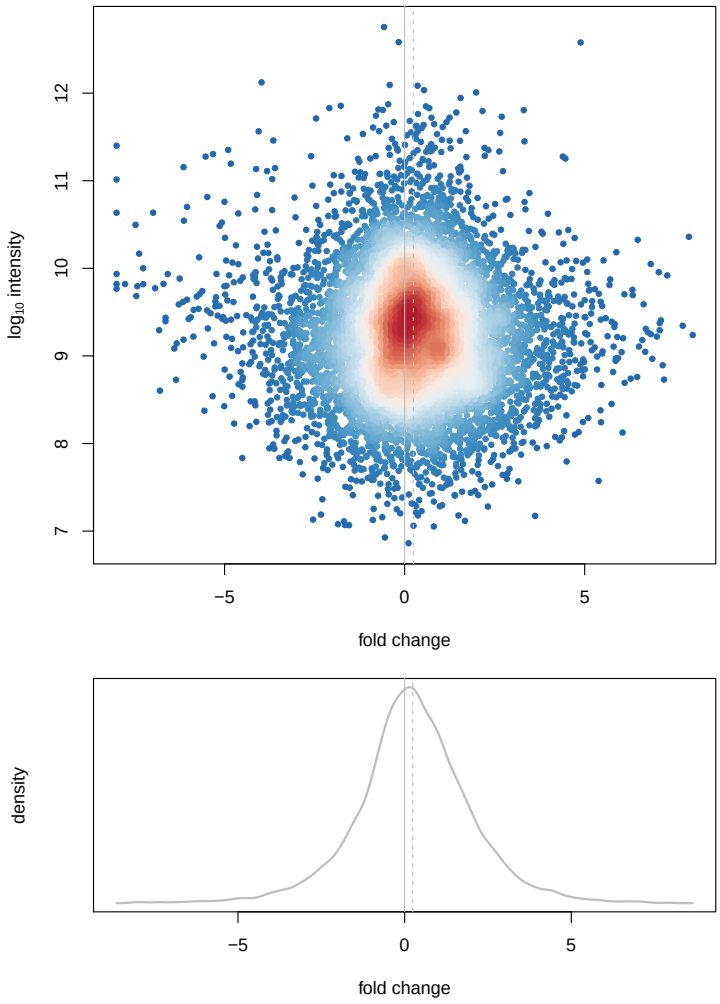

Figure 6: Fold changes of peptide abundances 1 and 3.
median(fc) = 0.2421 sd(fc) = 1.7661

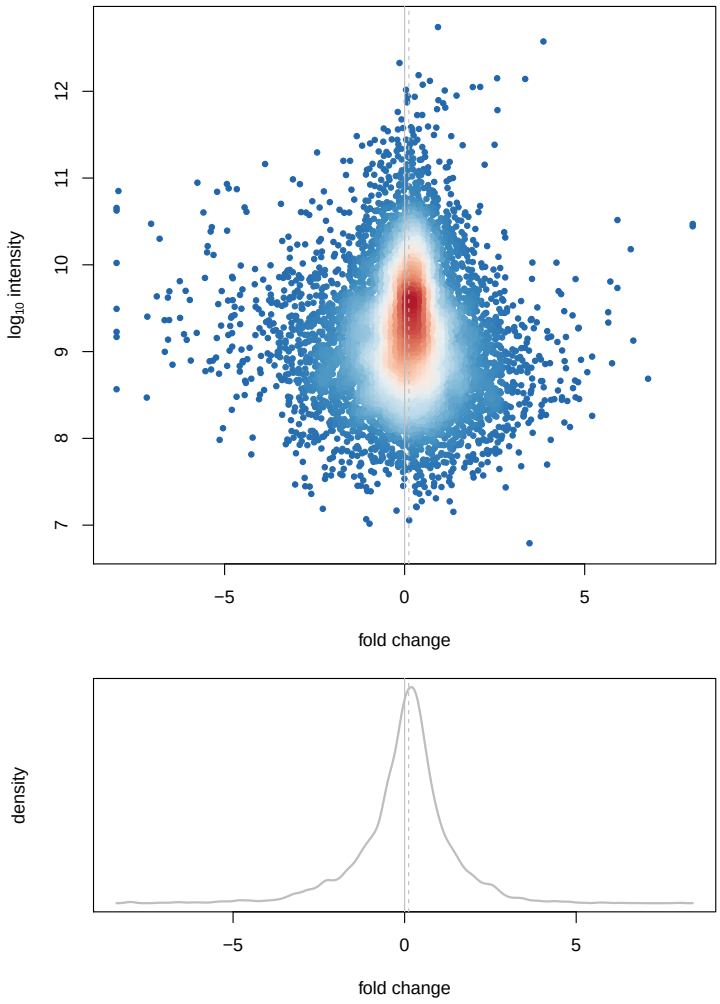

Figure 7: Fold changes of peptide abundances 2 and 3.
median(fc) = 0.1175 sd(fc) = 1.3543

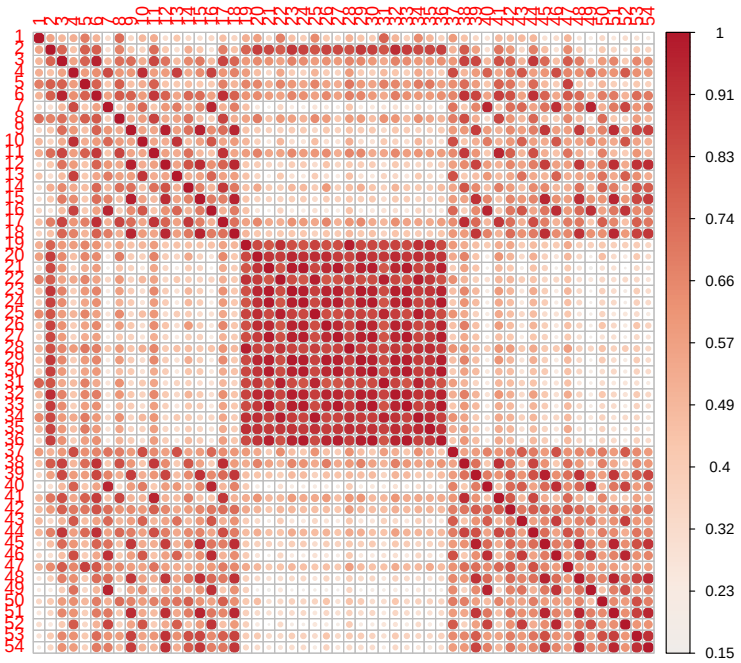

Figure 8: Pearson correlation of all peptide abundances. (min correlation = 0.1484, median correlation = 0.5701, max correlation = 1)

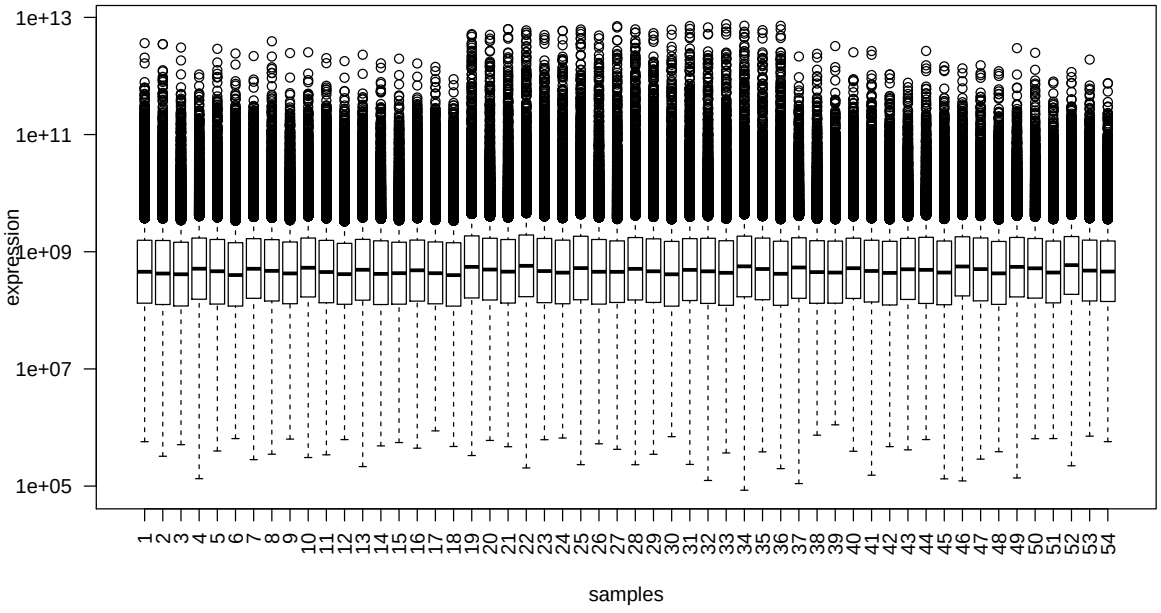

Figure 9: Boxplot of all peptide abundances.

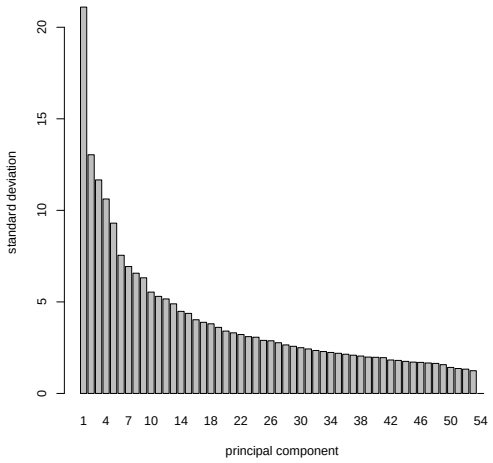

Figure 10: PCA components.

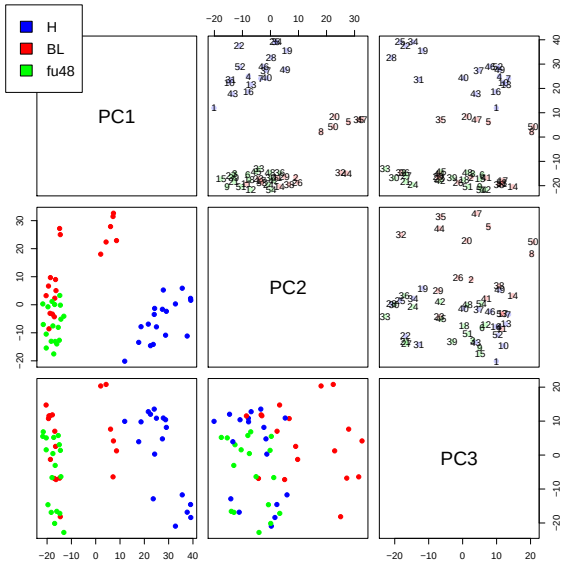

Figure 11: Principal Component Analysis of all peptides with complete quantifications. Any peptides with one or more missing values are ignored. The numbers in the upper right panels correspond to the sample IDs.

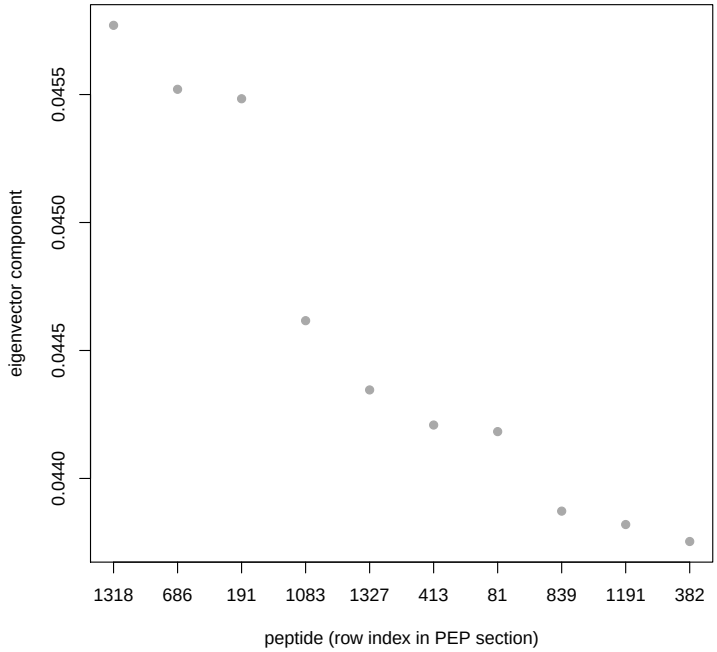

Figure 12: PCA 1st eigenvector.
