Report for PEP Section in mzTab File

example_4

The PEP section of the mzTab file contains 1,335 quantified peptide features measured in 54 samples.

	number of peptides
quantified	1,335
identified (total)	1,335
identified (unique modified)	1,221
identified (unique stripped)	1,212

Table 1: Total number of quantified and identified peptides.

mod	specificity	number
Oxidation	M	179
Methylthio	C	150
Label:13C(6)15N(2)	K	6
Label:13C(6)15N(4)	R	4

Table 2: Statistics of modifications.

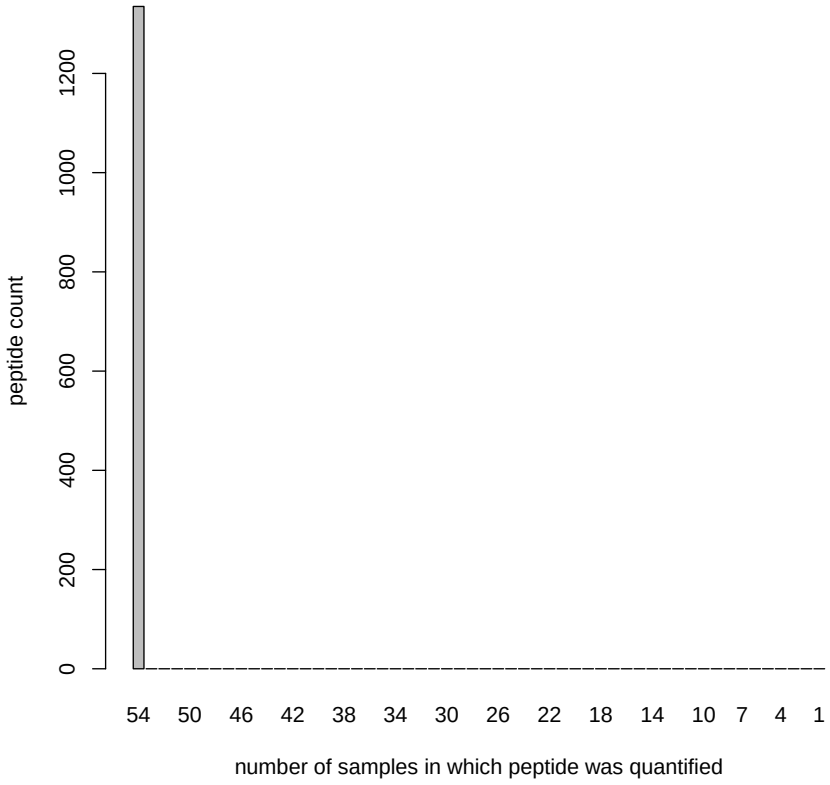

Figure 1: Frequency plot of peptide quantifications.

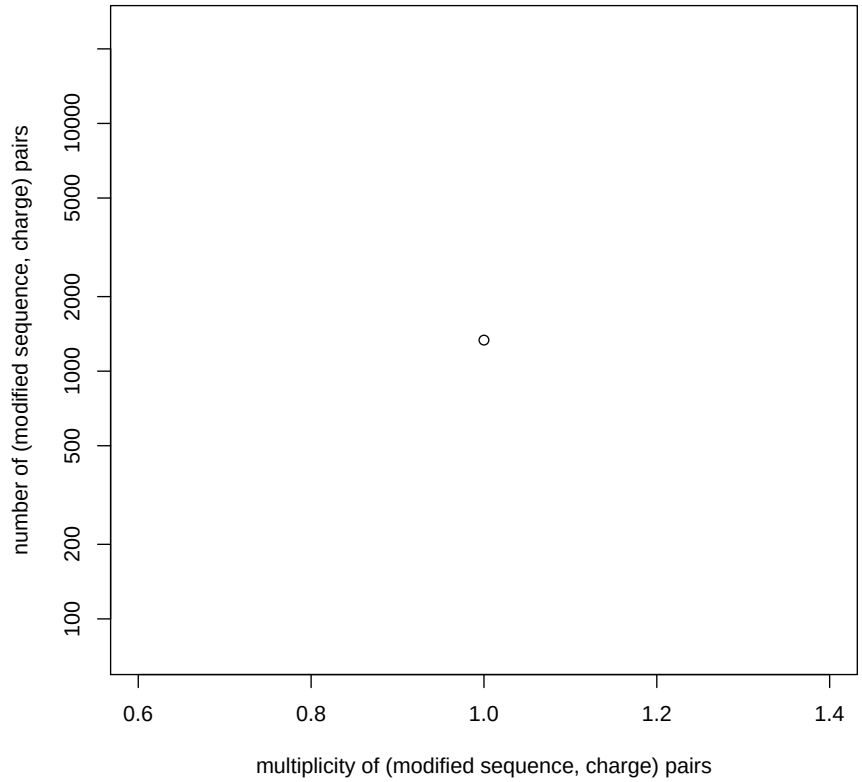

Figure 2: (modified sequence, charge) pair multiplicity vs frequency plot. Each peptide feature (characterised by a (possibly) modified peptide sequence and a charge state) should ideally occur only once in the analysis. In other words, peptides of multiplicity 1 should have a very high frequency. The plot below should show a significant spike on the left and can be used as QC of the analysis.

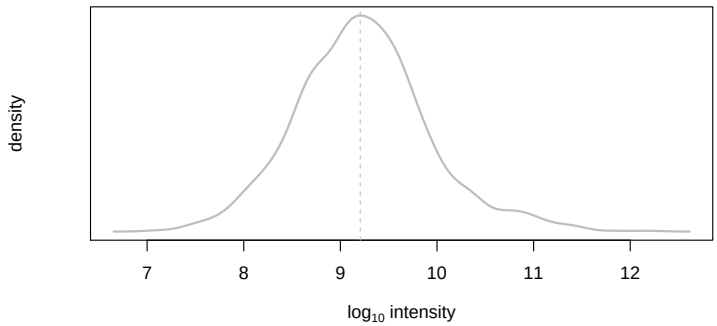
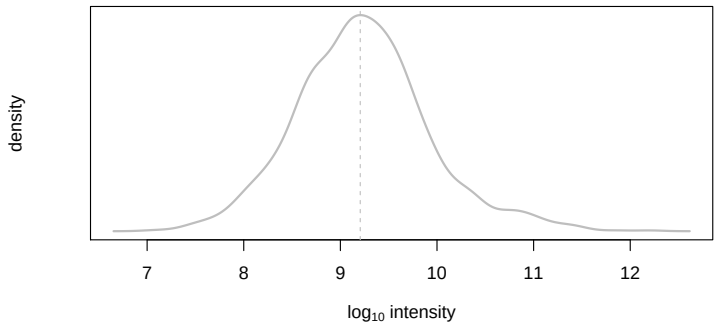
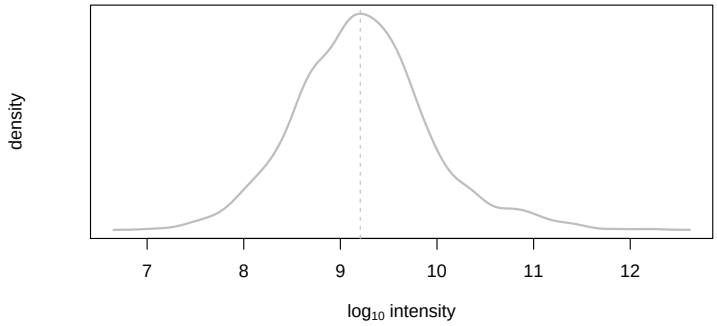


(a) peptide abundances 1, median(intensity) $= 1,605,469,952$



(b) peptide abundances 2, median(intensity) $= 1,605,469,952$



(c) peptide abundances 3, median(intensity) $= 1,605,469,952$

Figure 3: peptide abundance distributions.

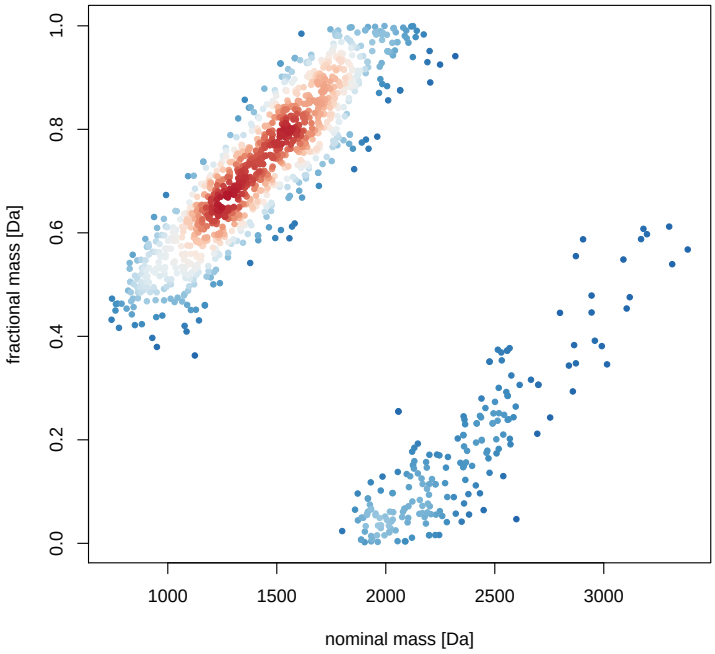


Figure 4: Kendrick nominal fractional mass plot

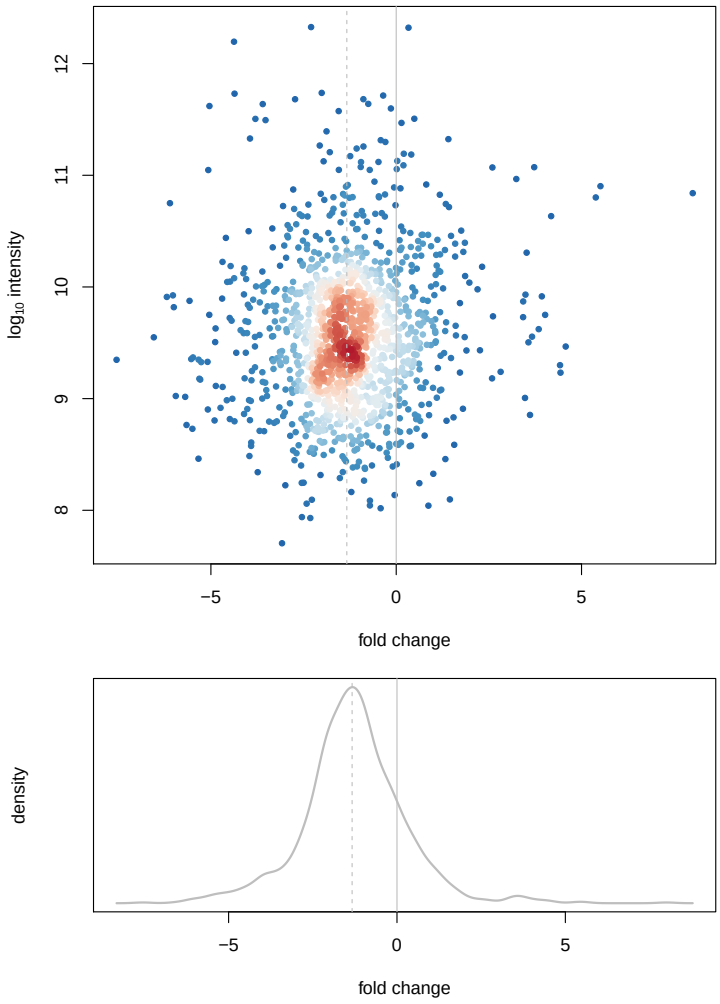

Figure 5: Fold changes of peptide abundances 1 and 2.
median(fc) = −1.3328 sd(fc) = 1.5445

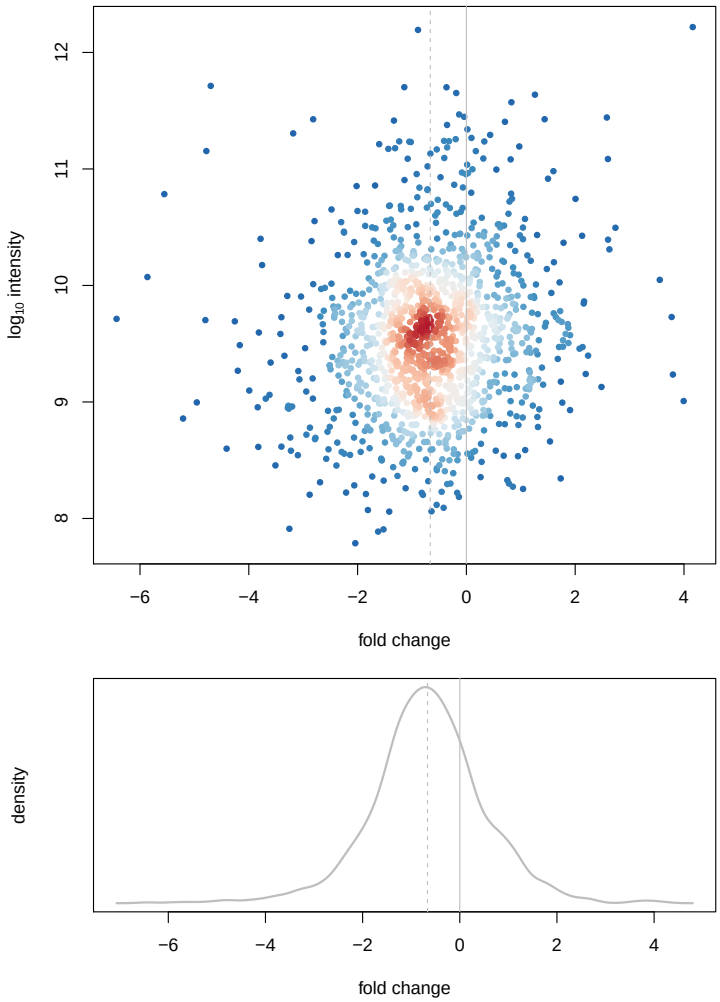

Figure 6: Fold changes of peptide abundances 1 and 3.
median(fc) = −0.6641 sd(fc) = 1.1804

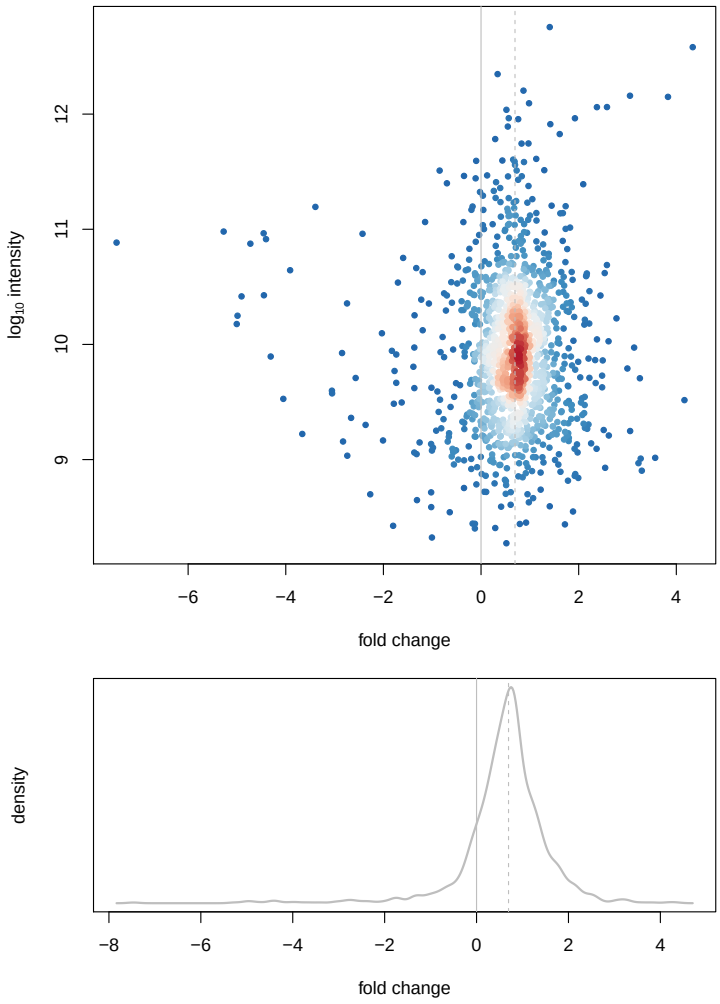

Figure 7: Fold changes of peptide abundances 2 and 3.
median(fc) = 0.6958 sd(fc) = 0.9636

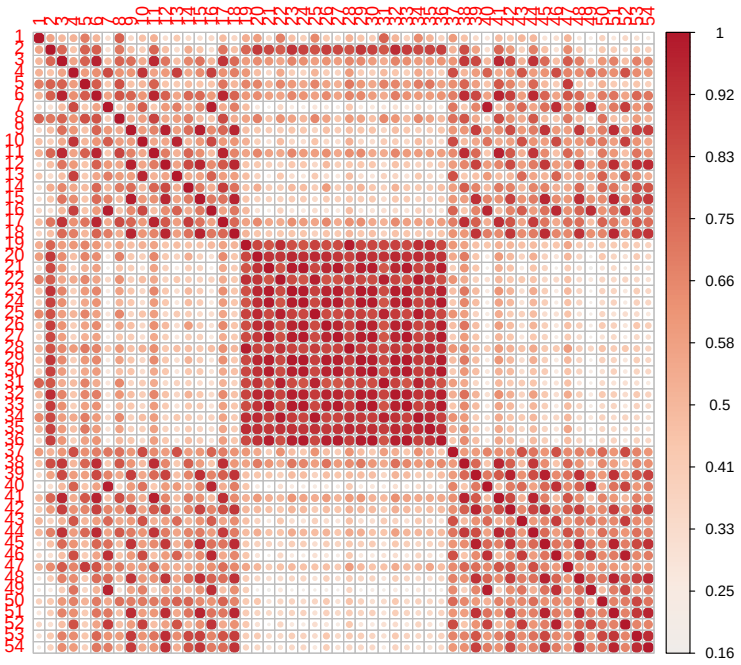

Figure 8: Pearson correlation of all peptide abundances. (min correlation = 0.1622, median correlation = 0.5936, max correlation = 1)

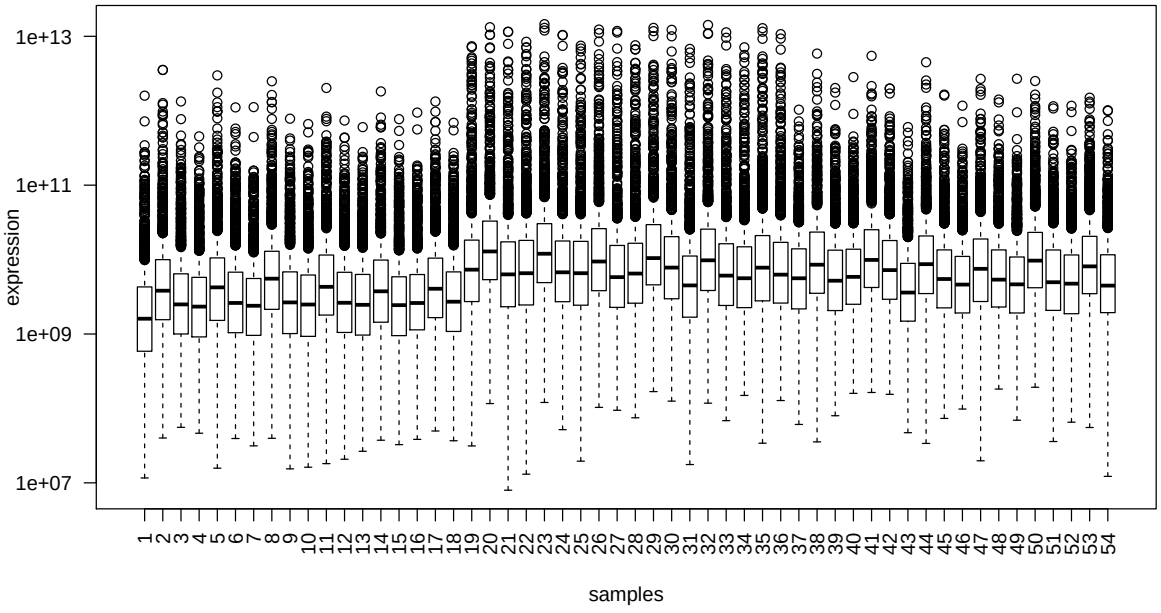

Figure 9: Boxplot of all peptide abundances.

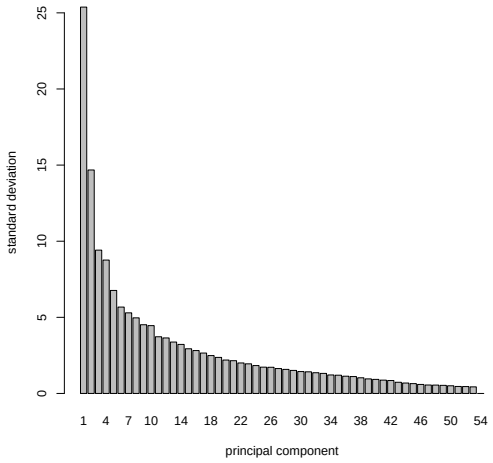

Figure 10: Standard deviation of all principal components.

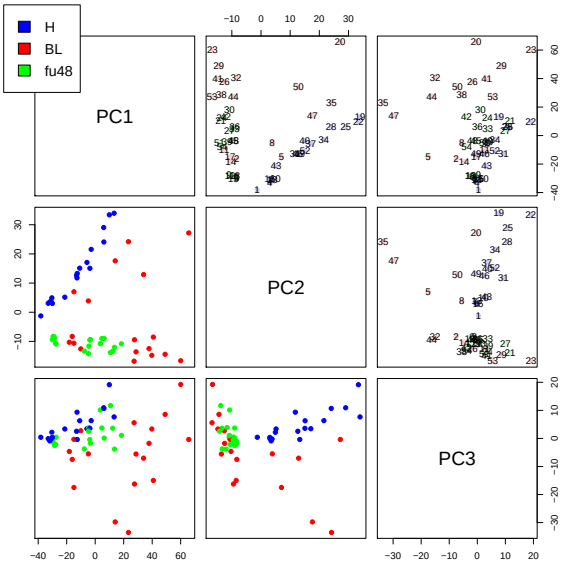

Figure 11: Principal Component Analysis of all peptides with complete quantifications. Any peptides with one or more missing values are ignored. The numbers in the upper right panels correspond to the sample IDs.

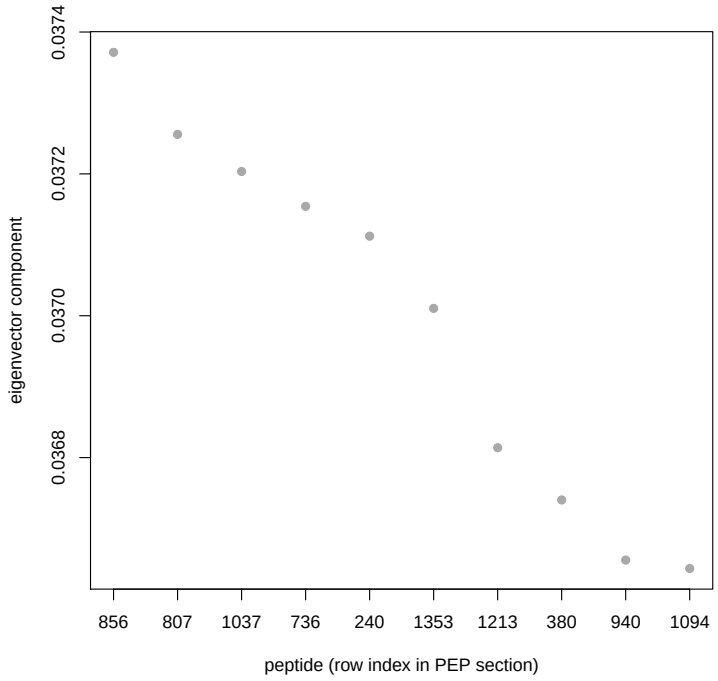

Figure 12: Most important contributions to the first principal component.
